

FusionHub Firmware 6.2.2 Release Notes

Release Date: 08/10/2015

1. New Features

Feature	Description
WAN Smoothing Support	FusionHub 6.2.2 Supports WAN Smoothing, making it useful for deployments where you require consistent 2-way connectivity such as videoconferencing or VoIP

2. Resolved Issues

Reference no.	Improvement
11359	PepVPN: When two peers try to establish PepVPN to each other at the same time, there is a chance that they will fail to connect.
13345	PepVPN: If PepVPN is established behind NAT, after a period of usage, PepVPN will become unstable after a WAN up / WAN down event.

3. Known Issues

Reference no.	Details
6911	PepVPN: PepVPN chart may incorrectly show severe packet loss if encryption is enabled.

4. Report a Bug
