

## **Pepwave *MAX BR1* Firmware 6.0.3**

Firmware Upgrade Package

**Release Notes**

**(Jul 18, 2013)**

---

### **Changes to Firmware 6.0.3 since 6.0.0**

---

#### Added:

- SNMP supports mobile WAN and SpeedFusion interface
- SSID client isolation
- CLI SSH support

#### Improved:

- SpeedFusion performance and stability
- System stability
- LAN DNS proxy stability

#### Known issues:

- Data Roaming checkbox is not working when Network Mode is Verizon
- Cellular WAN signal strength will not display correctly if stronger than -51dBm
- Wi-Fi AP access control "deny all except listed" malfunction
